ScoreLinkII user manual

ScoreLink

COMPONENTS

Able to travel with you or be permanently installed

POWER SUPPLY

Standard USB style power supply provides power.

NETWORK CABLE

RJ45 Connector enabling local or cloud based data.

INDICATOR LIGHTS

Various indicator lights for connection statuses.

INTERFACE CABLE

19V standard power supply provides power to the ScoreHub.

Manual

The ScoreLink device comes in a box with 1 multi-interface cable (Gray – Daktronics / Electromech, Red=Fairplay, and Black=Nevco, and other controller will need a custom cable, please contact Support/Sales).

These cables are used to connect ScoreLink to your scoreboard controller.

Powering the ScoreLink device depends on the model - the base ScoreLink model will power via USB A-B cable to a Windows PC, and the POE ScoreLink will power via Power-over Ethernet. When using POE, it must be on the same subnet as the Windows PC to work.

After powering you ScoreLink device and hooking it up to the scoreboard controller with the correct cable, you will need to head to our website (www.sportzcast.net).

Once you are there, log in and go to DOWNLOADS under the user tab.

There, select ScoreConnectIII from the list.

After downloading the software, Open ScoreConnectIII by opening the web browser and entering the address "localhost:5000".

On the "Settings" tab select your ScoreLink model from the dropdown list.

Then, on the "Set the scoreboard data" section select the scoreboard brand, the connection type, and the sport. Finally click the submit button to trigger the configuration.

This software is where you manage everything: current scoreboard data, connectivity, team names, and more.
