# Sportzcast delivers the official game clock to NCAA liveStats

Staying in sync has never been simpler. For the first time collegiate statisticians will be freed from manual clock control.

The Sportzcast ScoreLink enables real-time clock data to be delivered directly from a standard scoreboard controller over a Local Area Network (LAN) to power your NCAA LiveStats computer.

Straightforward Installation, no technician needed! The pocket sized ScoreLink device connects to a typical scoreboard controller output port via a custom supplied cable. A standard Cat5/6 cable will both power the device and allow a connection to the statisticians' computer on the same network.
